LETTER OF RECOMMENDATION

It is my pleasure to recommend **SRI VENKATA KOUSIK RAJA MUKKAVALLI** for the graduate program at your University. I have known him since two years and have taught him the courses “Analog communications” and “Digital Communications”.

His discussions during the Digital Communications course expressed his command over the fundamentals. He also took the initiative to learn a lot through discussions after regular class hours. He has a wide perception of courses and eagerness to put them into practice. His inquisitive mind and intelligence augurs well in driving him to ponder over improvements for a current system/model. I strongly feel such qualities of his will greatly facilitate research work at your university.

Kousik is one of those earnest students whom you would always see in the laboratory, working on different equipment all throughout the day often exceeding the college hours. The passion he had for practical work was evident from the number of hours he spent in lab. His Matlab programs and Simulink designs – during the Digital Communications laboratory – were always among the efficient and best solutions. He finished assignments punctually with ease and with minimum assistance. He liked to experiment with the latest technologies and applied a lot of research and insight to make his work perfect. He was very motivated and energetic about his project works and put in a lot of effort in their implementation.

Personally he possesses a zealous attitude towards learning and is always ready to share his knowledge with his batch mates. This became very evident when he volunteered to conduct numerous classroom seminars on various technical and non-technical topics. Kousik is not only an excellent student, but he is also personally delightful. As I got to know him over the semester, I became more & more impressed by the wide range of his abilities.

I believe that Kousik’s strong academic abilities and his dedication make him a very strong candidate for graduate study and I wholeheartedly recommend Kousik as a prospective Graduate student with appropriate financial aid. In fact, I can think of few students whom I would recommend as highly.
